

CAREER PROFILE

Passionate about working with data and by how it can translate your fancy quantitative work into information that the business can understand and take action on. My keen to learn new technologies, tools, and approaches to find business insights with so much data now available, this drives me to change my pursuing career in Data Science.

EXPERIENCES

Data Science Student 2017 - 2018
General Assembly, Sydney

Python

- Became proficient in Python language for Data Science

Git & Github

- Tracking changes & iterations using git commands from terminal

Exploratory Data Analysis

- applied advanced Numpy and Python skills to clean, analyze and test data from multiple messy datasets. Pandas & Pivot Tables, SciPy & Pivot Tables, Web Scraping, Bootstapping and Tableau

Classical Statistical Modeling

- Linear & Logistic Regression, Bias-Variance Tradeoff, Gradient Descent, Feature Selection, Regularization & Optimization and K-Nearest Neighbors

Machine Learning Models

- Clustering, Ensemble Models, Natural Language Processing (NLP), Naive Bayes, Hadoop & MapReduce, Hive & Spark and Time Series Analysis (ARIMA)

Advanced Topics & Trends

- Neural Network Basics, Recommender Systems, Multi-Armed Bandit (Bayesian) and Portfolio Development

Office Clerk 2017 - 2017
Sydney Waste Services, Sydney

Data entry and customer service.

System Implementer & Programmer 2007 - 2009
Mannasoft Technology Corporation, Philippines

As a System Implementer I handled from testing and implementation of Timekeeping and Payroll systems. With my familiarity on the systems and programming I was promoted as Programmer for one of the accounts that I am handled.

PROJECTS

Following are essentially my projects from General Assembly. Please visit my GitHub and blogs account for more information regarding my other projects

Capstone Project - Predicted future population using data from Census Australia and made Sentiment Analysis like Most Talkabout, Positive & Negative Reviews and Topic Modelling, from scraping Google Reviews of salons around target areas of a business client who wants to open a hair dressing salon.

Job Market Analysis - Scraped Data related jobs of Indeed websites to analyse which features contributed on predicting salary. This project consists of testing the three major skills: collecting data by scraping a website, using natural language processing, and building a binary classifier.

House Price Prediction - Predicted sales prices and practice feature engineering using kaggle's Ames Housing dataset. Used statistical analysis to optimize investment and maximize return.

SKILLS & PROGRAMMING LANGUAGES

Python	Tableau	Data Analysis
SQL	AWS	Predictive Modelling
Java	Microsoft SQL Server	Web Scraping
HTML/CSS	Microsoft Excel	Natural Language Processing

Jovy Postrado

EDUCATION

Data Science Immersive
General Assembly Sydney
2017 - 2018

Software Development
ACES Centre Sydney
2011 - 2013

Business Administration
Bridge Business College
2009 - 2011

Computer Science
Technological Institute of the Philippines
2001 - 2005

LANGUAGES

English (Professional)

Tagalog (Native)

INTERESTS

Machine Learning

Artificial Intelligence

Apps Making

Journals & Planners
